All rights reserved. 2020 Elsevier España, S.L.U. and SEMICYUC Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website. Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active. Recomendaciones sobre reanimación cardiopulmonar en pacientes con sospecha o infección confirmada por SARS-CoV-2 (COVID-19). Resumen ejecutivo 44 9 16 5 2020

566 576 Medicina Intensiva 10.1016/j.medin.2020.05.004 PMC7229968 The SARS-CoV-2 pandemic has created new scenarios that require modifications to the usual cardiopulmonary resuscitation protocols. The current clinical guidelines on the management of cardiorespiratory arrest do not include recommendations for situations that apply to this context. Therefore, the National Cardiopulmonary Resuscitation Plan of the Spanish Society of Intensive and Critical Care Medicine and Coronary Units (SEMICYUC), in collaboration with the Spanish Group of Pediatric and Neonatal CPR and with the Teaching Life Support in Primary Care program of the Spanish Society of Family and Community Medicine (SEMFyC), have written these recommendations, which are divided into five parts that address the main aspects for each healthcare setting. This article consists of an executive summary of them.

La pandemia por SARS-CoV-2 ha generado nuevos escenarios que requieren modificaciones de los protocolos habituales de reanimación cardiopulmonar. Las guías clínicas vigentes sobre el manejo de la parada cardiorrespiratoria no incluyen recomendaciones para situaciones aplicables a este contexto. Por ello, el Plan Nacional de Reanimación Cardiopulmonar de la Sociedad Española de Medicina Intensiva, Crítica y Unidades Coronarias, en colaboración con el Grupo Español de RCP Pediátrica y Neonatal y con el programa de Enseñanza de Soporte Vital en Atención Primaria de la Sociedad Española de Medicina Familiar y Comunitaria, ha redactado las siguientes recomendaciones, que están divididas en cinco partes que tratan los principales aspectos para cada entorno asistencial. En este artículo se presenta un resumen ejecutivo de las mismas.
